

Waterman AHW Launches Australian Environmental Division

Waterman AHW formally launched an Environmental Division within their Australian operation in November. The team, lead by Associate Director Phillip Ware, offers a comprehensive range of environmental consultancy services. The Division's expertise includes Contaminated Site Assessments, Regeneration and Remediation, Environmental Impact Assessments and Environmental Impact Statements (EIA/EIS), together with Environmental Due Diligence.

Mr Ware commented "*Waterman Group has identified an opportunity in the Australian market for the company to utilise our considerable world-wide experience in the environmental consultancy sector, by offering our Australian clients cutting edge expertise in land remediation techniques, as well as proven success in the disciplines of EIA/EIS and Due Diligence*".

The constraints placed on greenfield development are tightening in Australia, consequently, the redevelopment of former industrial, marginal or brownfield sites is the favoured option for developers, planners and other stakeholders. Waterman AHW's approach is to ensure that the realistic potential of such sites is maximised through robust investigation and analysis, followed by leading edge design and the application of proven and innovative technologies which we have successfully applied on numerous sites.

The successful integration of masterplanning; quality in design; environmental assessment; and the ability to demonstrate sustainable development, increasingly determines the chances of securing planning permission for significant developments in Australia. Waterman AHW's Environmental Division assists clients to appraise, develop, refine and present their plans in a way that meets these objectives.

Waterman AHW is a multi-disciplined international Consulting Engineering business offering a comprehensive range of services to both local and international markets, across a wide range of construction related projects. Waterman AHW provides engineering services design for Mechanical, Electrical, Hydraulic, Fire, Structural, Civil, Environmental, Sustainability and Engineering Facilities Management disciplines including, Services During Construction.
